BMW R 1300 GS / ADVENTURE

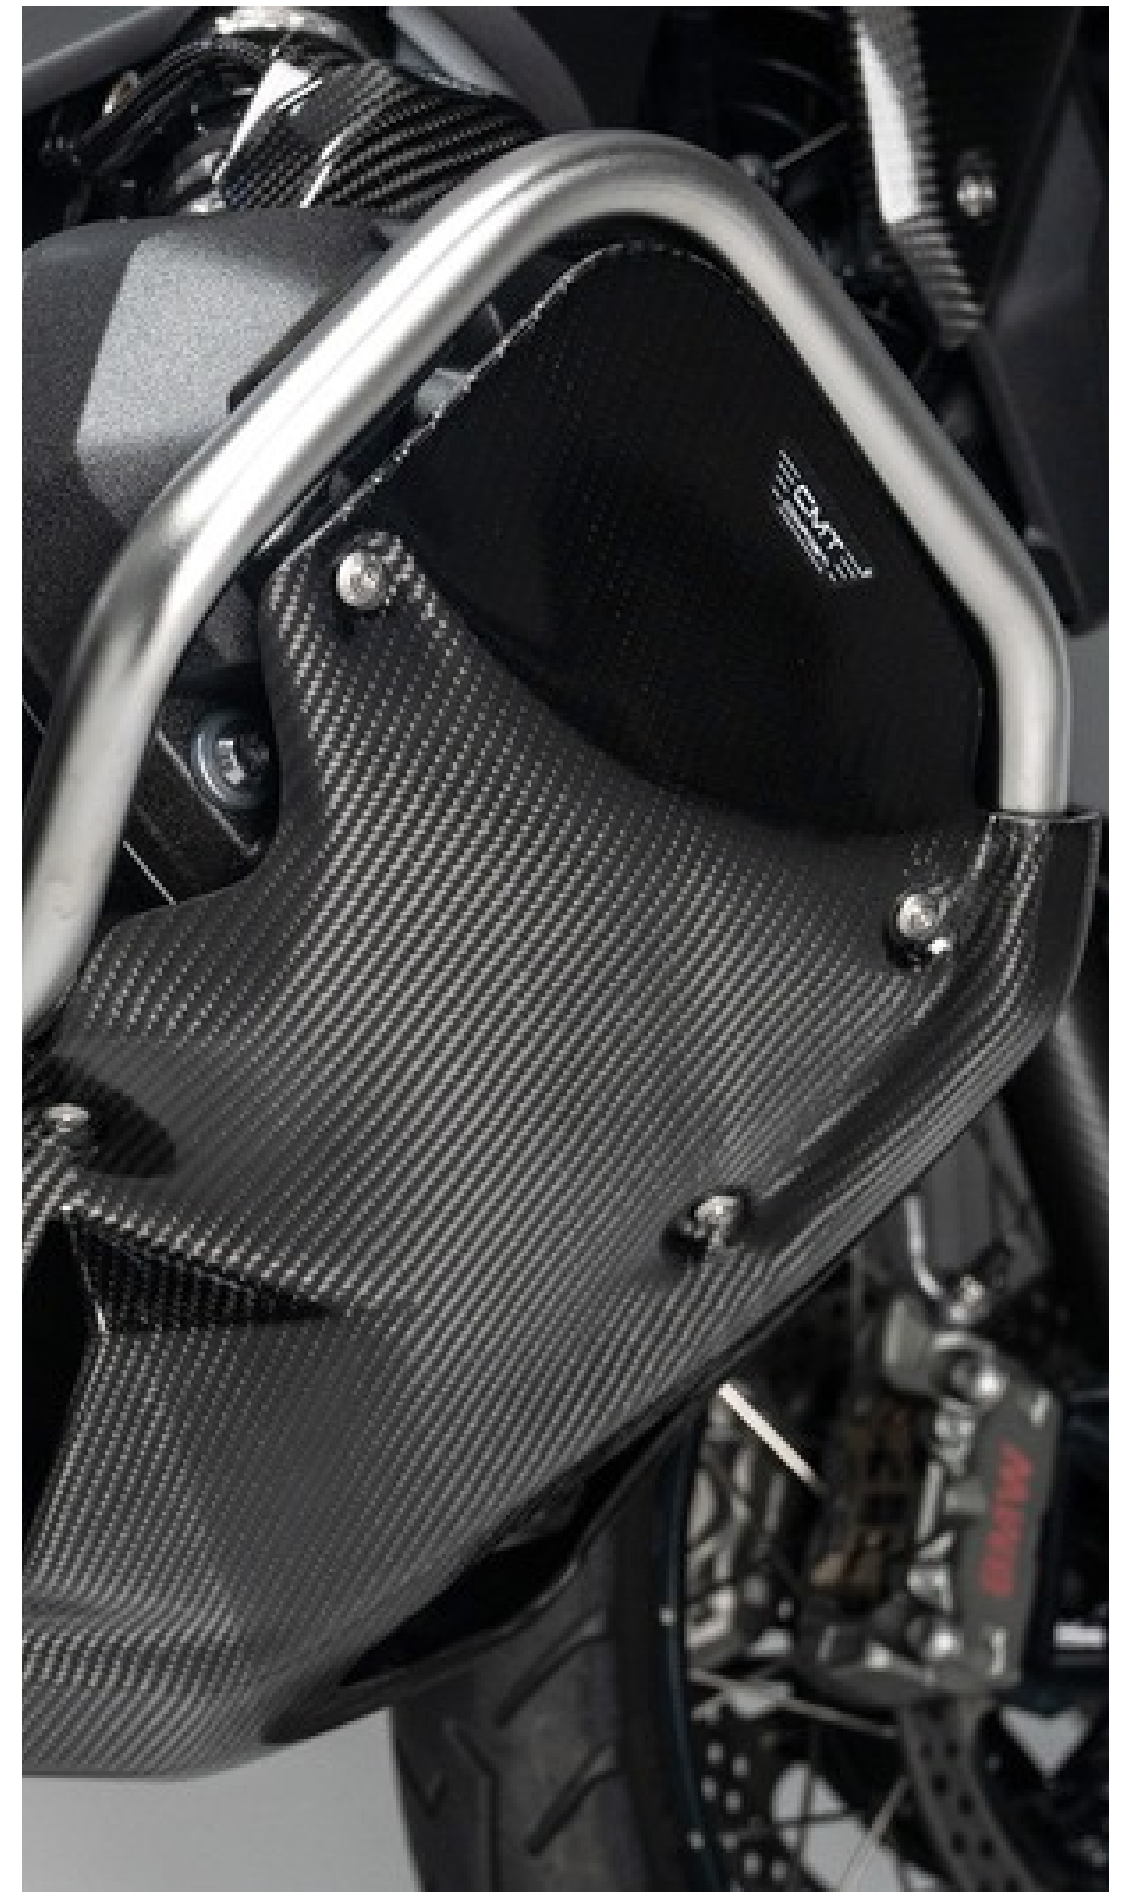

ENGINE GUARD

Designed to provide maximum protection for your BMW engine, combining functionality, aerodynamics, and style in a single component. The side air intakes not only enhance cooling performance, but also optimize aerodynamic flow, giving the bike a bold and refined look that won't go unnoticed.

Every traffic light, every stop, every pit stop becomes an opportunity to experience new emotions and stand out from the crowd.

Made from prepreg carbon fiber and cured in an autoclave, the MAXXY engine guard is lightweight yet exceptionally strong, perfectly suited to even the most demanding conditions despite its generous size.

FRONT CARBON FIBER

FAIRING

Designed to enhance riding visibility, the lower-profile windscreen maintains excellent wind protection while introducing a stylish new element that blends perfectly with the lines of your BMW, giving it a sportier appearance.

TELELEVER PROTECTION

This component is essential for ensuring long-term durability, as it provides extensive protection against external debris that may strike the front of the motorcycle at high speed.

DEFLECTORS

Maintaining the original ergonomics, we developed new elements that result in lightweight yet exceptionally strong components, designed to elevate your riding experience to the next level. Suitable for all conditions, from demanding off-road terrain and long-distance journeys to track days on the circuit.

Installation is quick and intuitive, with no modifications required

FENDER

Made from prepreg carbon fiber and autoclave-cured using state-of-the-art manufacturing technologies, the CMT Compositi front fender offers the perfect balance of lightness, durability, and sporty design.
